

The Ergonomics Management System™

A 5-Step Approach to Implementing an Effective and Efficient Ergonomics Process

Most organizations today have established management systems for quality, productivity, safety, and other elements of their operations. Humantech can assist you in developing and implementing a sustainable ergonomics process that seamlessly integrates with your existing methods and culture. We achieve this through a five-part process we call The Ergonomics Management System™.

1. Gaps and fit – understand where the holes are.

Whether your goal is to comply with local regulations, meet company standards, or develop a world-class ergonomics program, we help you identify the gaps between where you are and where you want to be. Our experts review your workplace improvement history, operational culture, and current needs, and then identify the opportunities that best fit your business initiatives, capabilities, and industry.

2. Foundation – know where you are headed.

Companies that achieve breakthrough results through workplace ergonomics build a strong foundation to guide their success. Having worked with over one hundred Fortune 500 companies, we understand the need for a flexible and scalable solution that can handle the challenges of managing a process across multiple locations, various business units, and diverse geographies. Humantech experts help your organization establish common goals, define roles and responsibilities, and set performance expectations in a way that fits your unique structure, culture, and operational footprint.

3. Leadership – gain the support you need.

Top management endorsement is critical to your success. We help you build the case for your initiative, and then establish the knowledge base your leaders require to keep the organization focused on the critical measures needed to reach your goals.

4. Deployment – get it done.

This key step transitions your organization from “preparing and learning” to “doing and sustaining.” Through our proprietary assessment and solution tools, skills development, and central online system for managing the improvement process, we help you take control of your ergonomics process. You can train, measure, report, and drive improvements while reducing reliance on outside consultants and services.

5. Review – make sure it works.

After initial implementation, it is important to ensure the system is running correctly. Humantech experts review your organization’s established ergonomics management system against both the planned foundation elements and the known best practices of leading companies. The outcome is that both you and your leadership team understand which elements are working well and where it is necessary to develop a stronger, more effective and efficient ergonomics management system.

Drawing on more than 35 years of experience gained from developing hundreds of corporate ergonomics initiatives for our clients, Humantech knows what works.

About Humantech

For over 30 years, global companies have relied on Humantech for workplace improvements. By combining the science of ergonomics and our unique 30-Inch View®—where people, work, and environment intersect—we deliver practical solutions that impact safety, quality, and productivity. At Humantech, we know people make productivity happen.
